

SYNTHOLOGY.NET

ES2-ESSENTIALS

This soundset contains 128 synthesizer patches for Apple LOGIC's ES2 software synthesizer.

The sounds are sorted in following categories:

Basses / FX & Perc / Leads / Pads / Sequence / Textures.

The list includes (besides sound name and description) a root key for each individual sound. This key gives you a little hint in which pitch the sound is meant to be played, the keyboard region where it sounds „best“. Don't forget: This is just a recommendation, you can play all sounds in every pitch you like.

Please notice:

There is no common standard for key labelling: Roland for example marks note no. 60 as C4, Yamaha (similar to Logic!) names the same note C3. Our root keys in the table are always compatible to LOGIC's notations.

Tip:

Except for the bass sounds (which should be played without any effects!) we suggest to add some reverb and delay to the ES2 channel to get a proper impression of the sonic potential of this amazing softsynth. Try and experiment!
